## YR5 Knowledge Organiser - Converting Units

## Key Concepts

- Convert between different units of metric measures: kilometre and metre; centimetre and metre; centimetre and millimetre; gram and kilogram; litre and millilitre
- Understand and use approximate equivalences between metric units and common imperial units such as inches, pounds and pints

Key Vocabulary

- metric / imperial
- length / mass / volume / capacity
- millimetres / centimetres / metres / kilometres
- inches
- grams / kilograms
- pounds
- litres / millilitres
- pints
- estimate / approximate
- convert

## Metric Measures

There are $1,000 \mathrm{~g}$ in 1 kg . To convert from kg to g , we need to multiply by 1,000. To convert from g to kg , we need to divide by 1,000 .

## $8.109 \mathrm{~kg} \times 1,000=8,109 \mathrm{~g}$

| $1,000 \mathrm{~s}$ | 100 s | 10 s | 1 s | 0.1 s | 0.01 s | 0.001 s |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 8 | 1 | 0 | 9 |
| 8 | 1 | 0 | 9 |  |  |  |

There are $1,000 \mathrm{ml}$ in 1 l . To convert from l to ml , we need to multiply by 1,000 . To convert from ml to l , we need to divide by 1,000

$$
5,072 \mathrm{ml} \div 1,000=5.072 \mathrm{l}
$$

| $1,000 \mathrm{~s}$ | 100 s | 10 s | 1 s | 0.1 s | 0.01 s | 0.001 s |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 5 | 0 | 7 | 2 |  |  |  |
|  |  |  | 5 | 0 | 7 | 2 |

The conversion diagrams below demonstrate how to convert between $\mathrm{mm}, \mathrm{cm}$ and m .

## Imperial Measures

Imperial measures can be used to calculate weight and height.

```
2.5cm \approx 1 inch
```

"My cat Lulu is 16 inches long $2.5 \times 16=40$ therefore she is approximately 40 cm long.'

$$
1 \mathrm{~kg} \approx 2 \mathrm{lbs}
$$

"I weigh 72 lbs. $70 \div 2=35$ so | weigh approximately 36 kg ."

We can also use imperial measures to calculate capacities

## $568 \mathrm{ml}=1$ pint

A cup for the soft drinks machine at the cinema holds 2 pints. $568 \times 2=1,136 \mathrm{ml}$
Each cup holds $1,136 \mathrm{ml}$ or 1.136l.
