## YR5 Knowledge Organiser - Volume

## Key Concepts

- Estimate volume, for example, using $1 \mathrm{~cm}^{3}$ blocks to build cuboids
- Understand how volume differs to capacity and cubic measures relate to millilitres
- Use the four operations to solve problems involving volume

Key Vocabulary

- volume
- capacity
- cubic measures / $\mathrm{cm}^{3} / \mathrm{m}^{3}$
- millilitres
- estimate

## Volume and Capacity

Volume is the amount of physical space that something takes up. Capacity is the maximum amount that a container can hold.

The capacity of the

$$
\text { jug is } 2.5 \text { litres. }
$$

The volume of the water in the jug is 1.75 litres.

How Cubic Measures Relate to Millilitres We can use cubic measures, for example $\mathrm{cm}^{3}$ and $\mathrm{m}^{3}$, to measure volume. To help us understand and visualise volume, it is useful to know that $1 \mathrm{~cm}^{3}$ is equivalent to 1 ml .

"The spoon can hold 5 ml . This means, if I have a level teaspoon of something, it has a volume of $5 \mathrm{~cm}^{3 . "}$

## Measure Volume

Volume is measured in cubic units because it is a measure of three dimensions (length, width and depth). We can use $1 \mathrm{~cm}^{3}$ blocks to build shapes and count them to find their volume.

The volume is $9 \mathrm{~cm}^{3}$.

## Compare Volume

By exploring volume with cubes, we can see that different shapes can have the same volume. For example, these shapes have the volume $12 \mathrm{~cm}^{3}$.

The volume is $13 \mathrm{~cm}^{3}$.

## Four Operations with Volume

Now, we can begin to solve problems involving volume:

A cup contains 250 ml of water. How many cups are needed to fill a bucket with a 2 l capacity?
$2,000 \div 250=8$ so 8 cups are needed
We should also be able to identify the most appropriate unit of measure, for example $\mathrm{m}^{3}$ for the volume of a classroom rather than $\mathrm{cm}^{3}$.

We can also compare shapes with different volumes.

## Estimate Volume

We can apply our understanding of volume to estimate the volume of different objects.

I estimate the volume of the box is $36 \mathrm{~cm}^{3}$.
