## YR6 Knowledge Organiser - Circles

## Key Concepts

- Illustrate and name parts of circles and know that the diameter is twice the radius

Key Vocabulary

- circle
- radius
- diameter
- circumference

## Parts of a Circle

There are three parts of a circle:

circumference

The circumference is the distance around the outside of a circle.

The diameter is the distance from one side to the opposite side of a circle, with the line passing directly through its centre point.

The radius is the distance from one side of a circle to its centre point.

## Calculating with Circles

The diameter of a circle is twice the size of its radius. The radius is half the size of its diameter.

Formulae can be used when calculating:

$$
d=2 r \text { or } r=d \div 2
$$

$$
r=8 \mathrm{~cm}
$$

The diameter is twice the size of the radius.

$$
d=2 \times 8 \mathrm{~cm}=16 \mathrm{~cm}
$$

$$
d=25 \mathrm{~cm}
$$

The radius is half the size of the diameter.

$$
r=25 \mathrm{~cm} \div 2=12.5 \mathrm{~cm}
$$
